Introduction

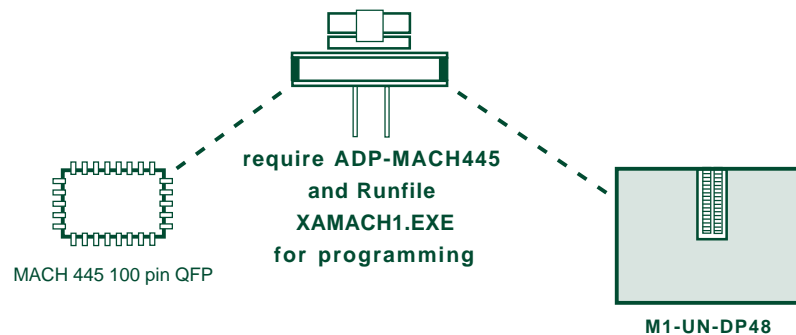

The Device List lets you know exactly which devices the Universal Programmer currently supports. The Device List also lets you know which devices are supported directly by the standard DIP socket and which devices require an adapter or a converter to be programmed. Each IC can come in different package such as DIP, PLCC, QFP, TSOP, PGA, etc.... Nearly all devices that come in a DIP package can be supported directly by the standard DIP socket. Devices that come in other packages will need a "converter" or "adapter" to be programmed. The following diagram illustrates this:

Example :

Some devices only come in surface mount packages like PLCC,PGA, SOP or have special programming requirements. These devices may also have higher pin counts from 44 pins to over 300 pins. These devices require an "adapter" to be programmed as well as an extra software driver. The software drivers are included with the adapters.

Example :
